
Sherman BARV conversion set

For Asuka kit Sherman M4A2

Tank Sherman BARV byl postaven na korbě tanku Sherman M4A2 na kterou byla navařena vodotěsná obrněná nástavba. Na plážích v Normandii bylo použito přibližně 60 těchto tanků a byly používány hlavně k vyprošťování uvízlé techniky. Tyto tanky byly schopné operovat ve vodě hluboké až 2,7 metru. Neobvykle pro tank, posádka zahrnovala potápěče, jehož úkolem bylo připevňovat tažné řetězy k uvízlým vozidlům.

The Sherman BARV tank was built on the hull of a Sherman M4A2 tank to which a waterproof armored superstructure was welded. Approximately 60 of these tanks were used on the Normandy beaches and were mainly used to recover stranded equipment. These tanks were capable of operating in water up to 2.7 meters deep. Unusually for a tank, the crew included a diver whose job was to attach tow chains to stranded vehicles.

Návod ke stavbě

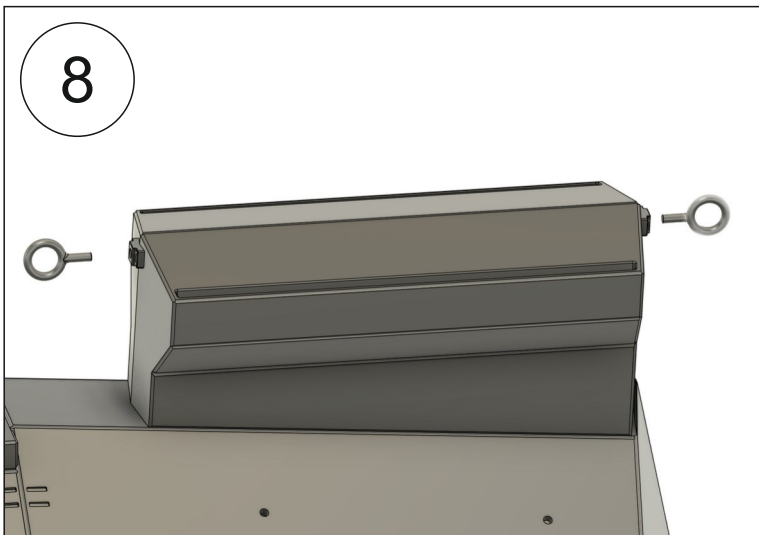

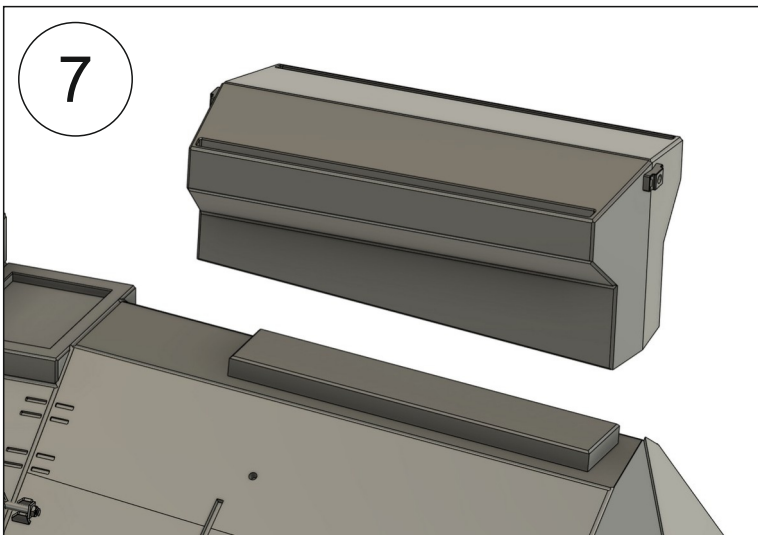

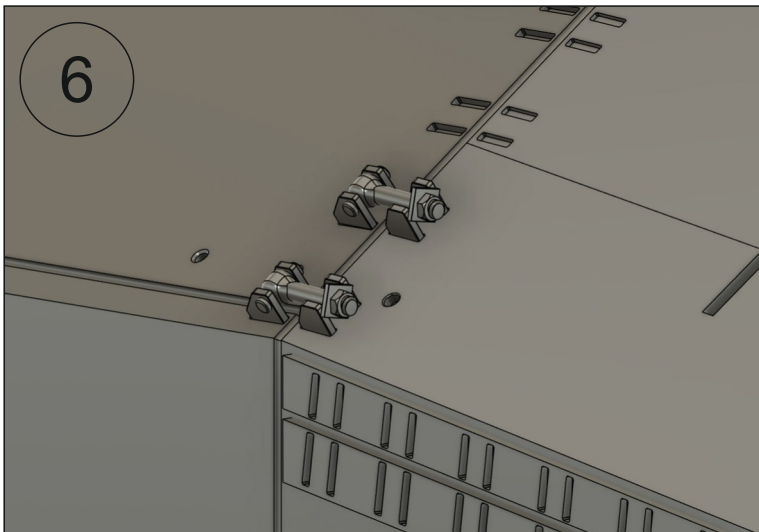

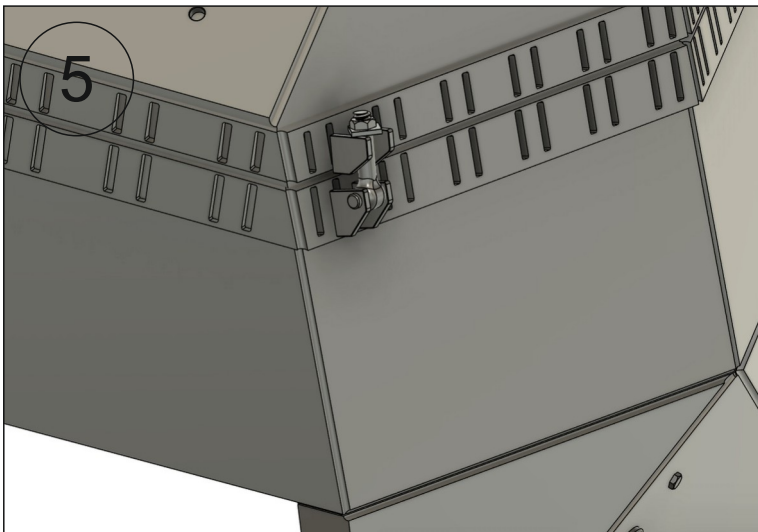

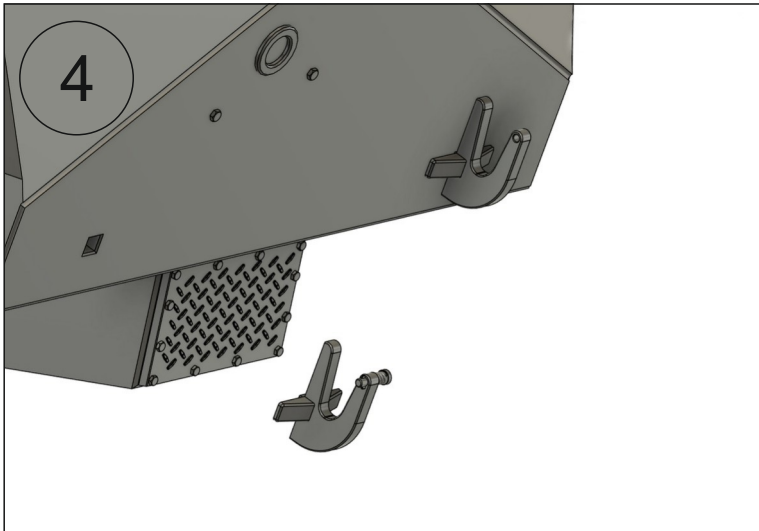

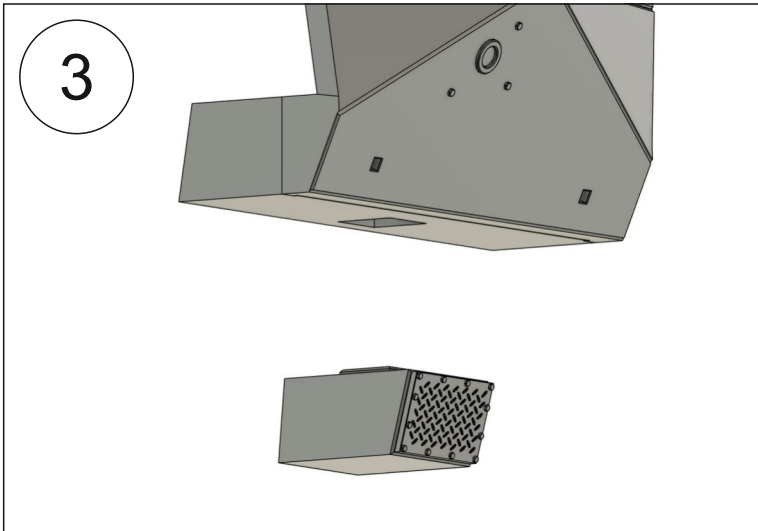

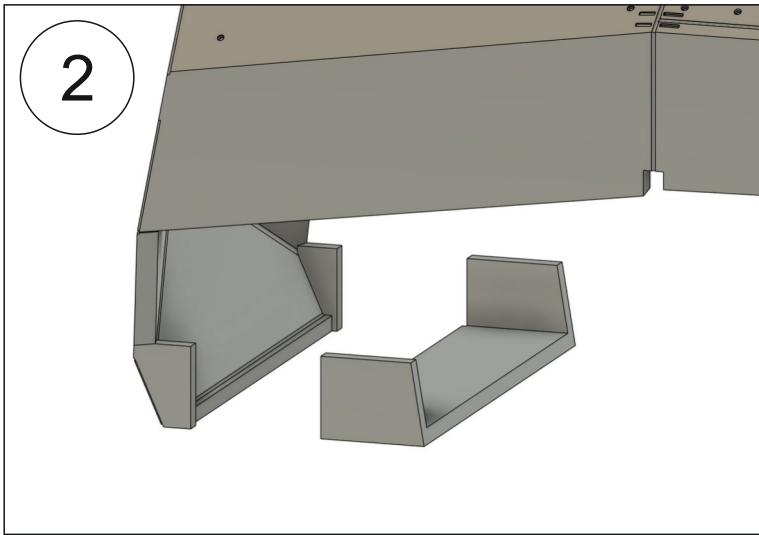

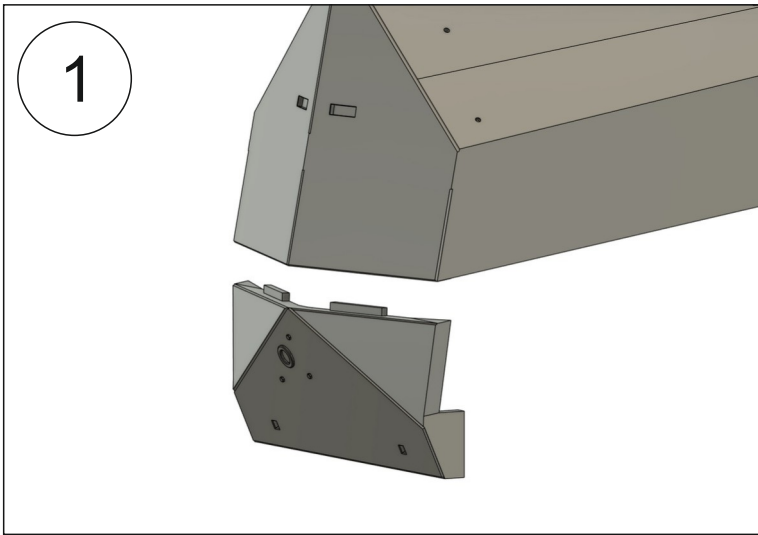

Při stavbě postupujte podle instruktážních obrázků.

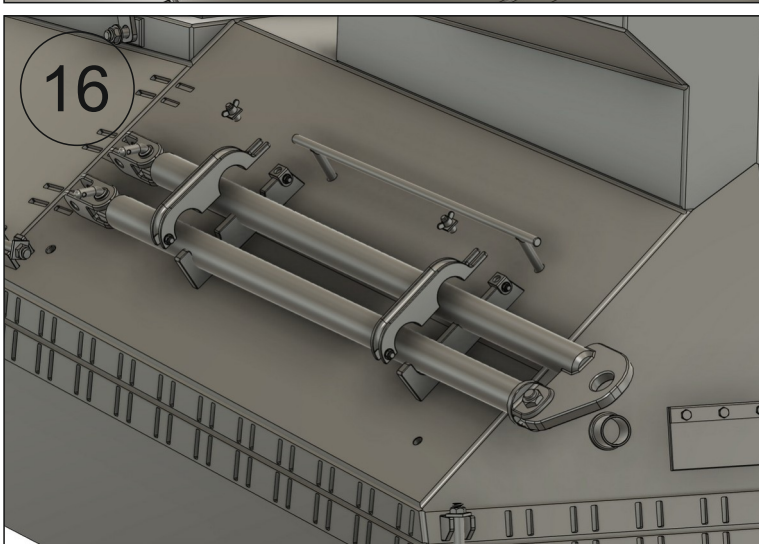

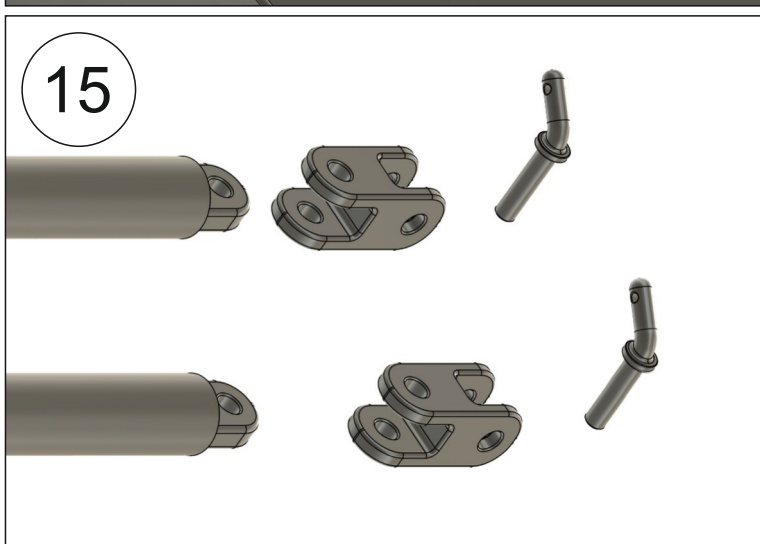

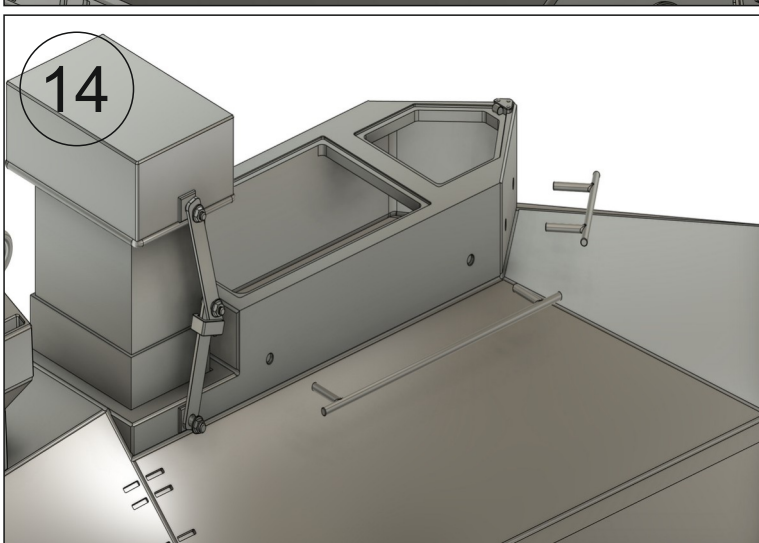

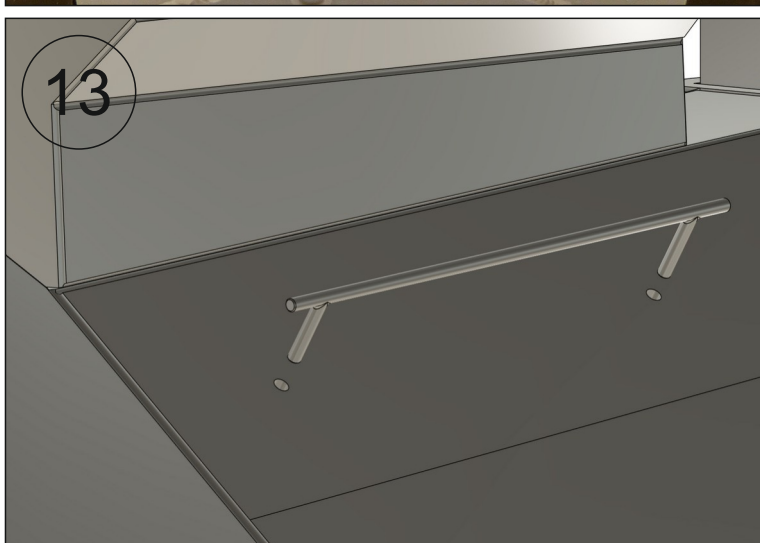

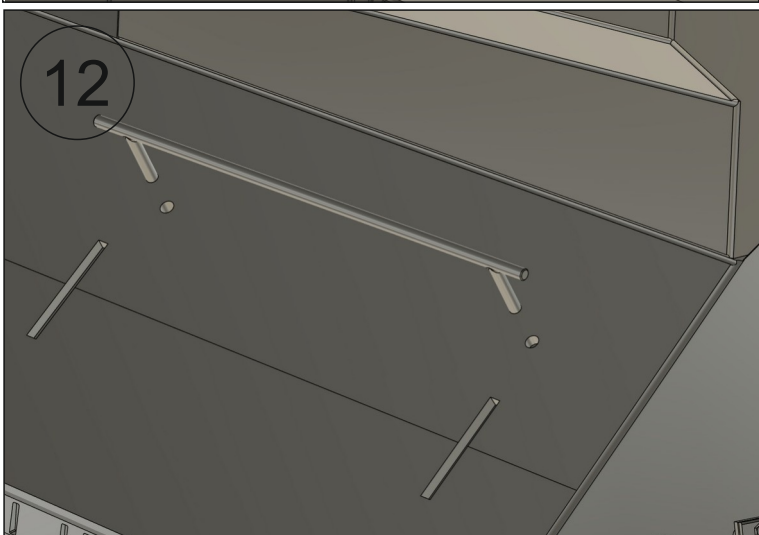

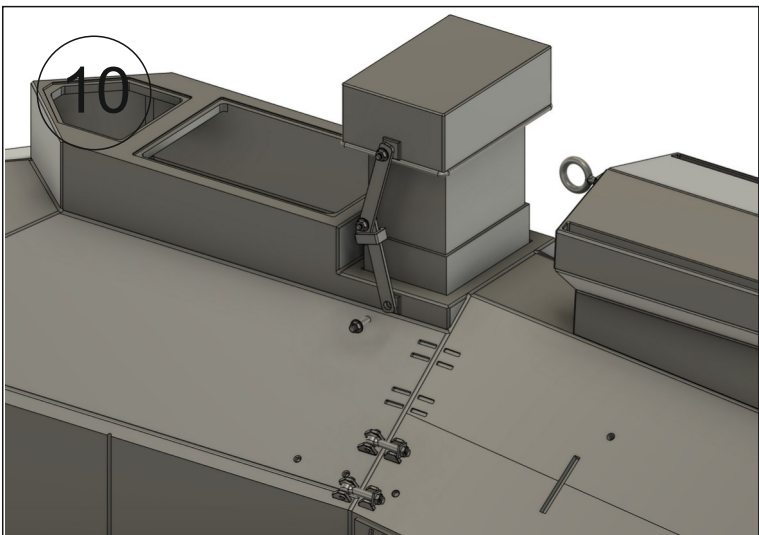

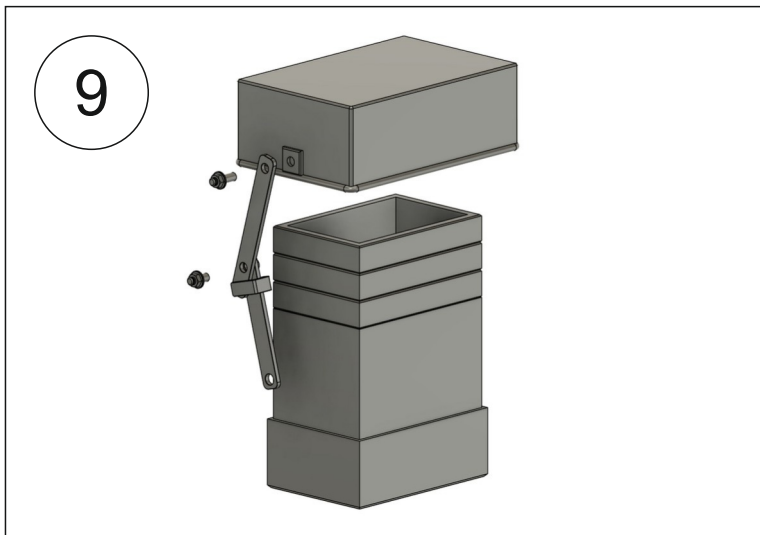

Instructions

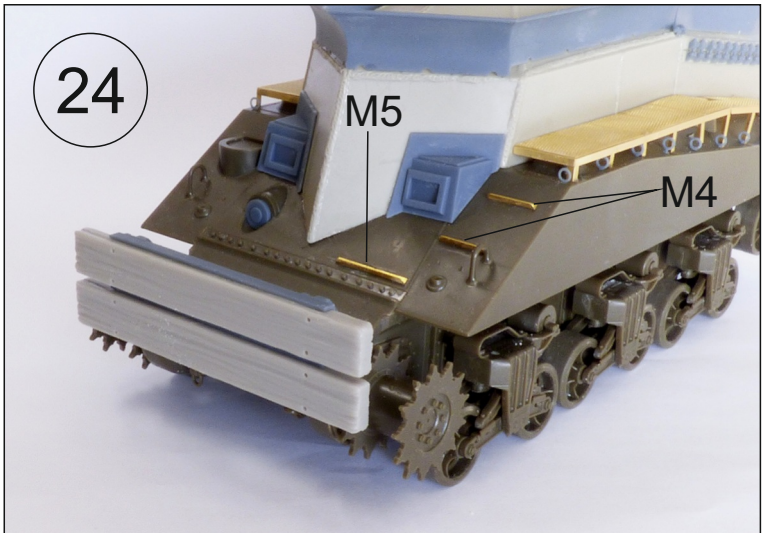

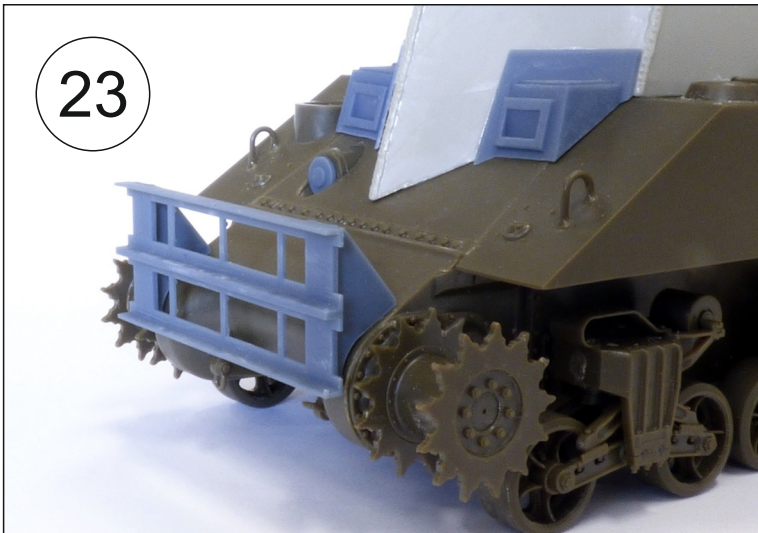

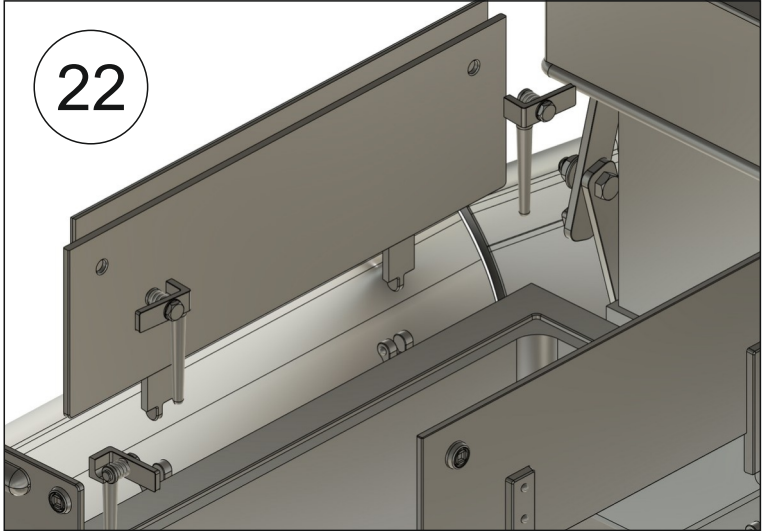

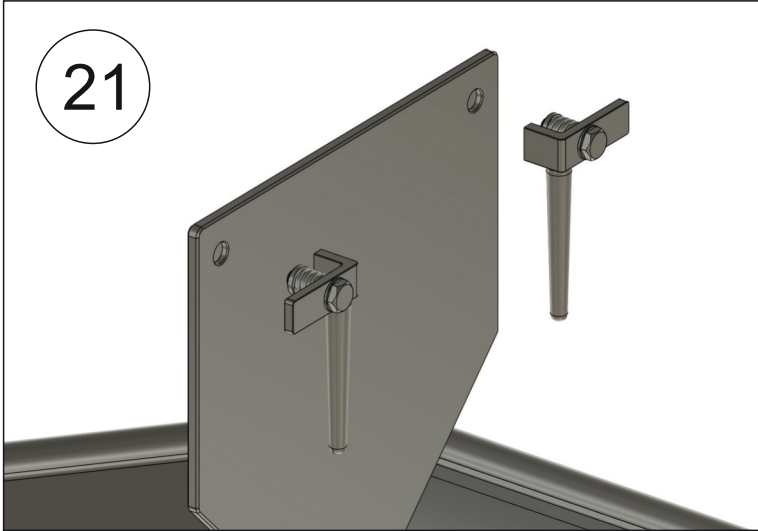

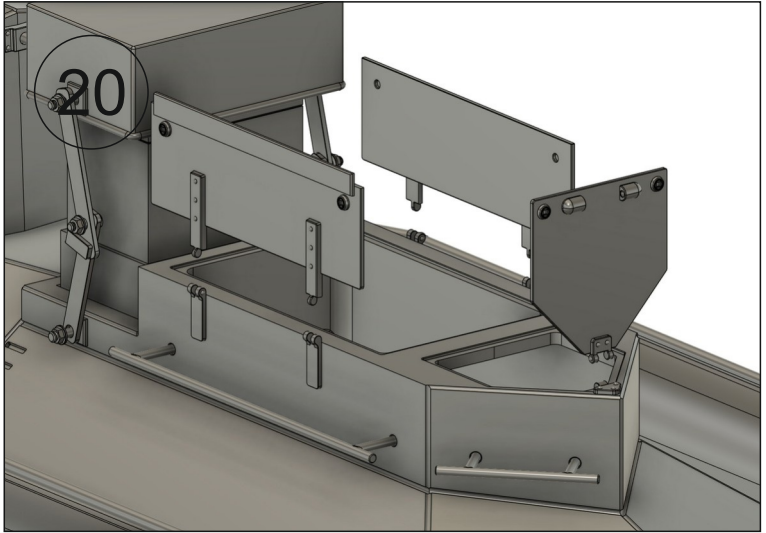

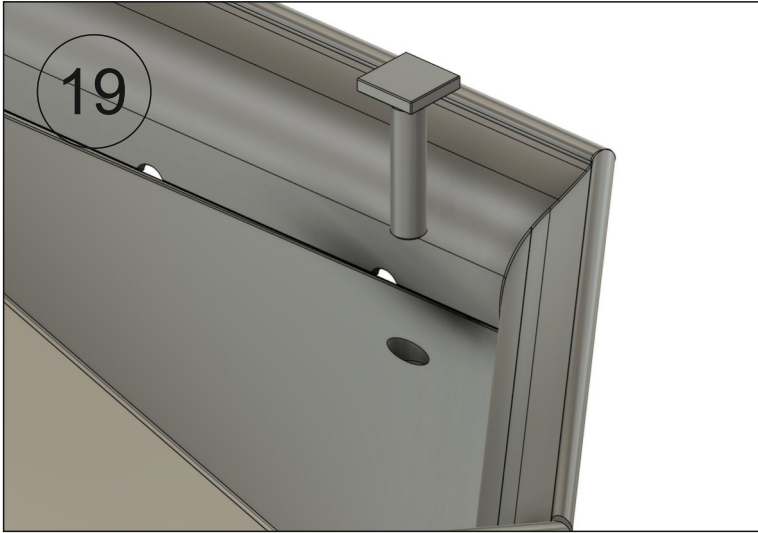

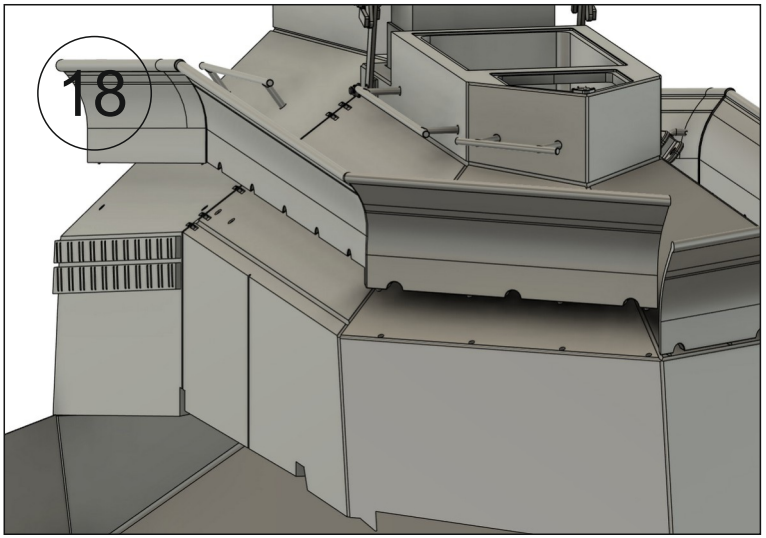

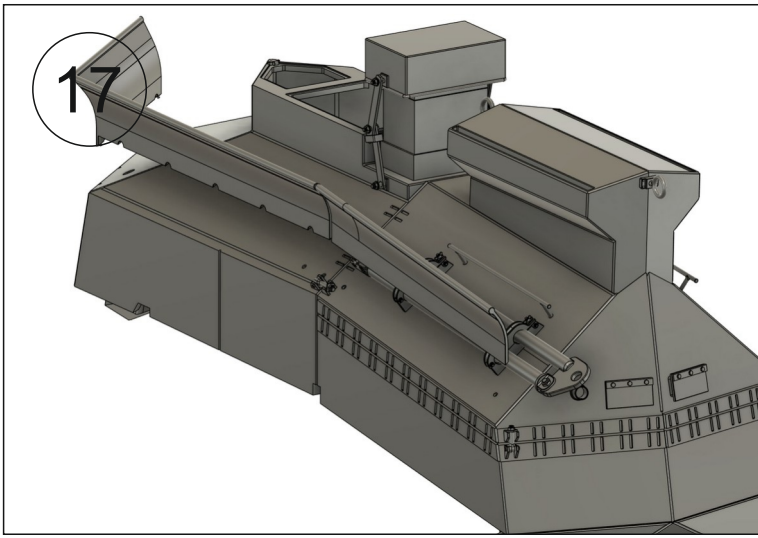

Follow the instruction drawings the assembly.

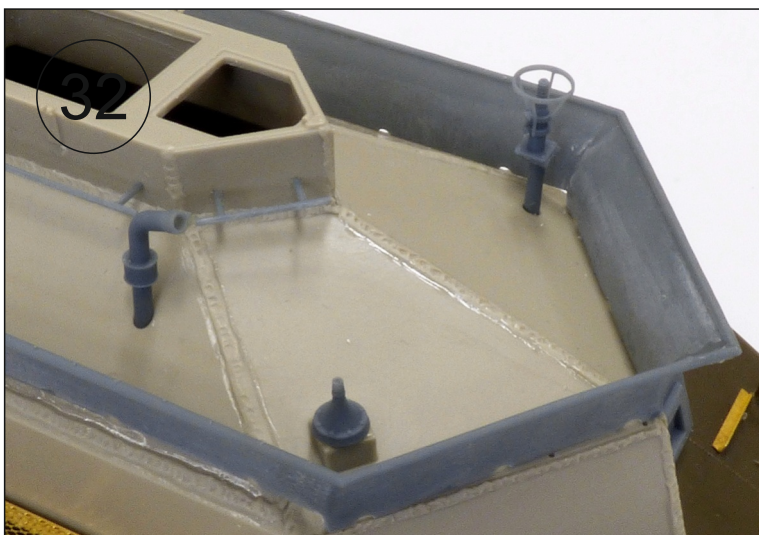

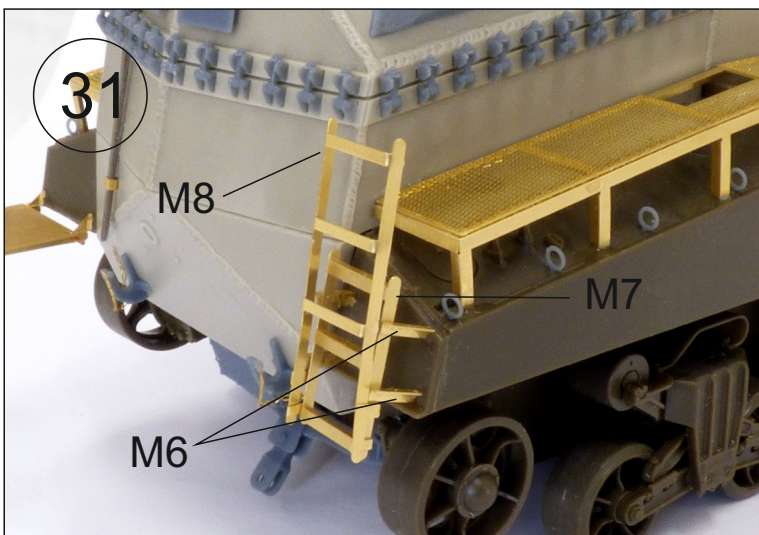

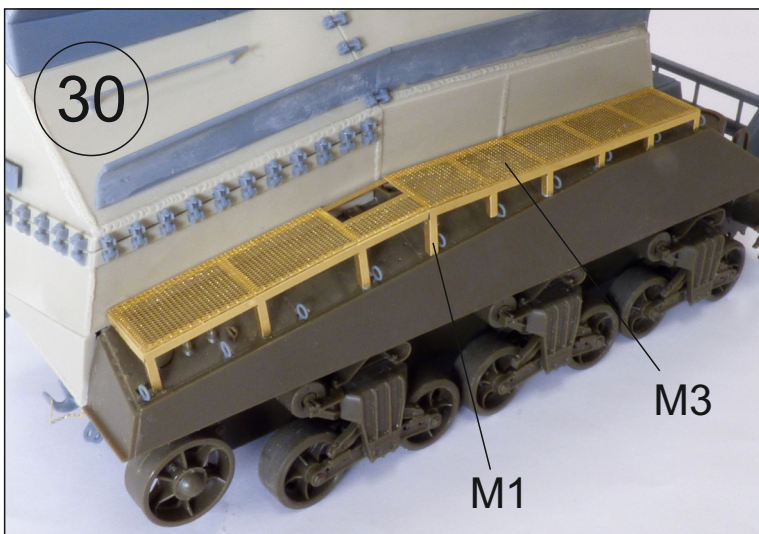

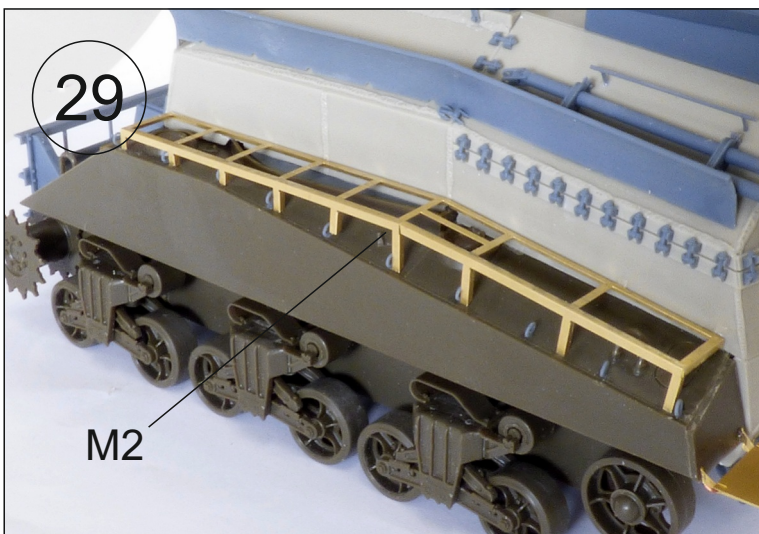

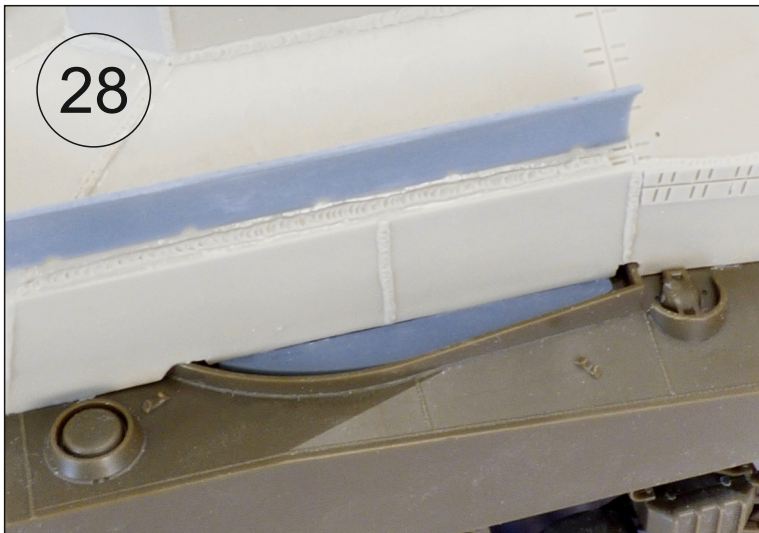

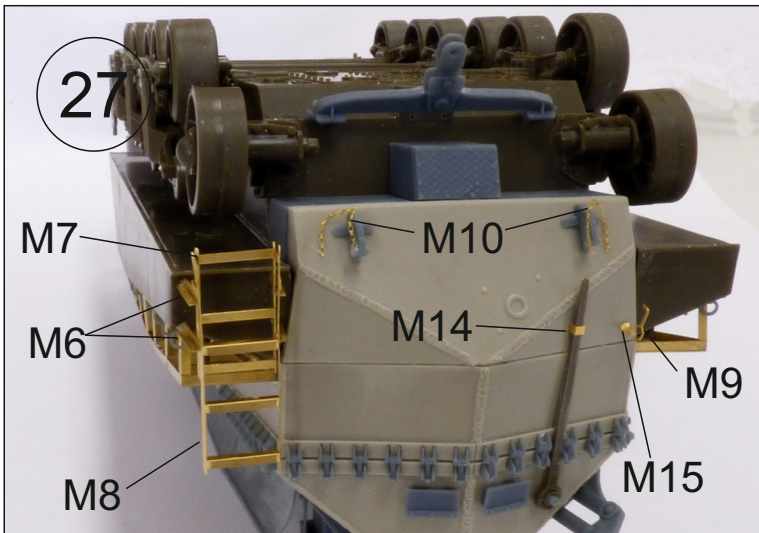

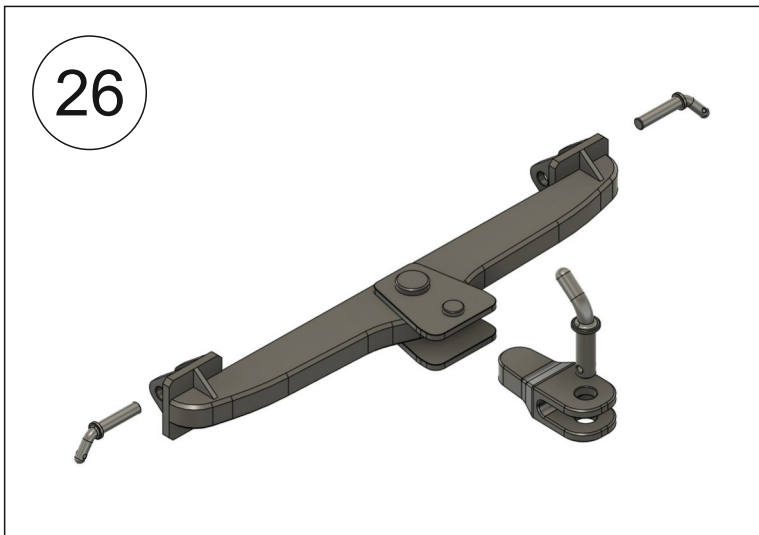

Upozornění: Během opracování může vznikat prach, který může dráždit dýchací cesty. Používejte ochranu očí při odšťihování kovových dílů.

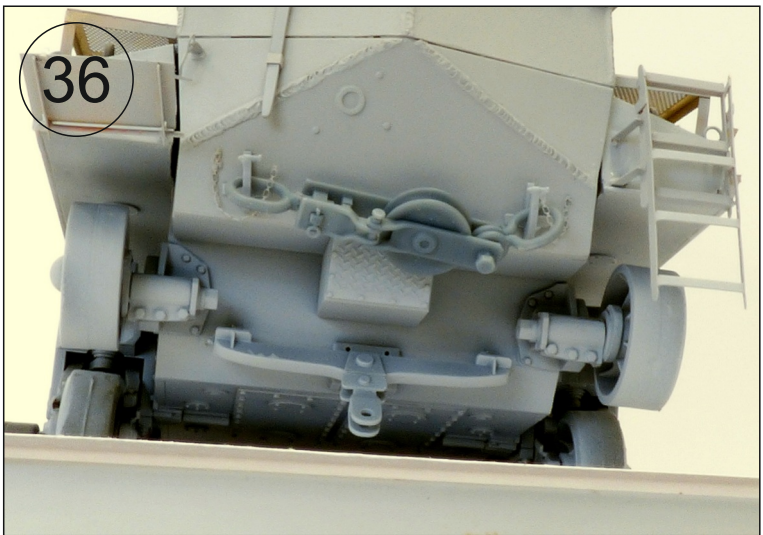

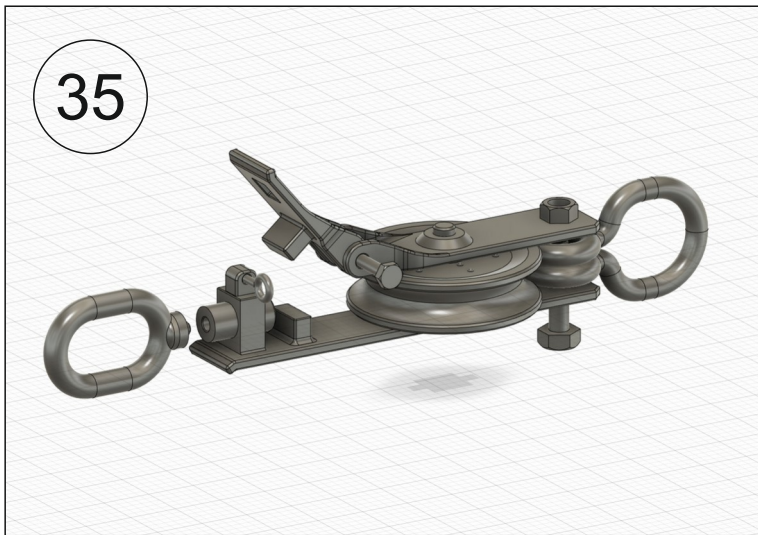

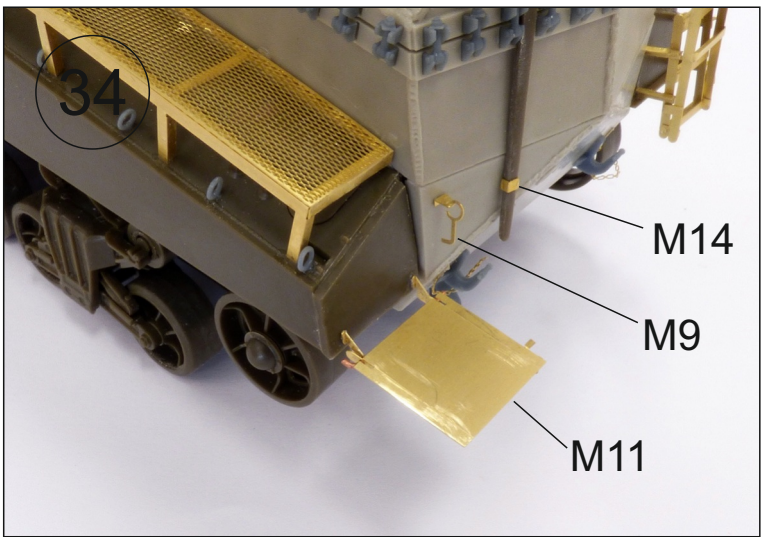

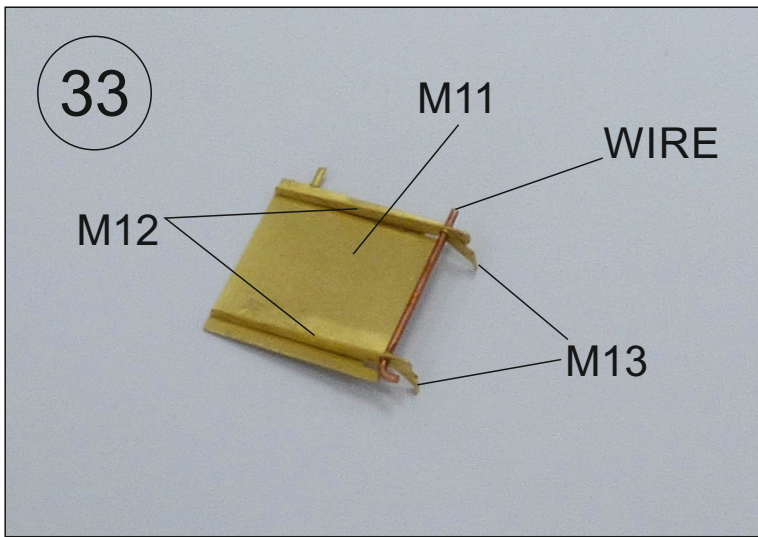

Notice: Machining can produce dust which can be irritating to the respiratory tract. Metal parts should be cut off using protection eyesight.

Camuflage and marking
